

Slainte Healthcare is Europe's fastest growing healthcare technology company (Deloitte Fast 500 EMEA). Founded in 2006 and head-quartered in Ireland, it has direct operations in the Middle East, Australia, Brazil, Africa and Asia.

SOLVING COMPLEX PROBLEMS IN HEALTHCARE

At Slainte Healthcare, we are passionate about delivering on commitments, solving complex problems for healthcare providers, with a combination of our leading edge technology and our expertise in process re-engineering. Our clients have achieved major gains in clinical and administrative processes, resulting in a redirection of resources and headcount towards patient care and minimisation of clinical risk.

OUR APPROACH...

- ⊕ Our software is designed to create efficiencies for our clients through the use of innovative technology. Saving you time & money.
- ⊕ **We understand that successful software requires adoption by it's users, hence our software is driven by simplicity & ease of use.**
- ⊕ Our software & services ultimately enable clinicians to improve patient care, leading to better patient outcomes.

CLIENT BENEFITS...

We empower hospitals to reduce the amount of time staff focus on patient administration and increase the amount of time staff spend on patient care.

We deliver sustained performance improvements, so that our solutions pay for themselves in a matter of months. You start realising the benefits instantly. Our pricing and

solutions work to accommodate your budget.

Our software & solutions enhances the productivity and functionality of your existing technology while also enabling rapid progress towards reduced paperwork, less duplication, and increased revenue focus.

Our software is easy. It retains the look and feel of your existing paper based solutions, enabling & inspiring adoption. By understanding that years of intellectual property, research & development have formed your documents & processes, we retain them and then add intelligence to further improve them.

Our software can be securely accessed from anywhere, in our outside the healthcare organisation.

Data & information, even complex structured and clinical data, is instantly reflected in the patient's record providing a complete audit trail & history.

We work alongside our clients to provide insights & solutions that support their processes, strategy and change.

YOUR

ELECTRONIC MEDICAL RECORD

Vitro is a user centric bespoke EMR that has 100% clinician use in hospitals, it can be customised with minimal change to the organisations existing processes. Vitro provides complete clinical usability, an open integration platform across all care settings and delivers rapid return on your investment.

Vitro delivers using your content, your care pathways, your business rules and your clinical expertise. Vitro ensures the users, their content and their patients are at the heart of medical records.

Vitro is designed with clinicians in mind, to understand the ways clinicians work and to be adapted to meet their needs. This leads to a clinician-centric EMR. Vitro provides an App based true medical record for clinicians and patients, capturing complex clinical data and integrating with all your hospital systems so a complete patient history is available in real time from a single source, electronic patient record.

Vitro naturally inspires user adoption. It is a system that adapts to the way you work, is simple to use, improves clinical decision support, captures complex clinical data for analysis, reduces costs and ultimately improves patient care and outcomes.

"Vitro is an amazing solution because it lets us take the existing paper workflow that Operation Smile has done such a great job developing, and put that on tablet devices without changing the look and feel of the workflow, and so for the clinician who is already used to the paper workflow, they have that same workflow but now it is on a tablet and we are able to digitise that workflow." **Paul Smolke, Industry Managing Director, Worldwide Health, Microsoft**

WHAT OUR CLIENTS SAY...

Talking about our Vitro software

"My children call me a technophobe. I only use a computer for work purposes - I don't use them in my leisure time. I found it really easy. To tell you the truth I have shown people in my department certain things that are available because it is so easy to use and scroll through."

Joanne Patira – AH Assistant Physiotherapy, Calvary Health Care

"Vitro has allowed us to reduce patient admission time by up to 16%. For patient re-admission, the time saving has been even greater, at up to 22% and only a couple of months later this has now been reduced to 50%. This time saving has a major benefit to our children, their parents and guardians and their care givers. Stress, administrative burden and clinical risk have all been impacted and reduced." **Kerry McLaverty, Clinical Services Manager, LauraLynn, Children's Hospice**

"The benefits to the dispensary and clean room have been enormous with considerable improvements in working conditions for pharmacy staff. More importantly, waiting times for patients attending the Day Therapy Unit has significantly reduced. Late changes to treatment regimens and dose changes are no longer causing delays to treatment even when these changes are communicated at the last minute... The time it takes to create a worksheet for complex regimens has been reduced from up-to 30 minutes to less than 5 minutes..." **Andrew James, Director of Pharmacy, Chris O'Brien Cancer Treatment Centre, Sydney, Australia**

Within weeks the Slainte team had already developed a prototype which we took to the field, the response from our volunteer clinicians was overwhelmingly positive! There is a sense of great excitement at Operation Smile and we can see enormous potential in how this is going to help the organization. Working with the Slainte Healthcare team is a pleasure and we are really looking forward to the final stages of the project this year." **Ruben Ayala MD, Senior VP of Programs and Medical Affairs @ Operation Smile, Inc.**
